## 1.0 Executive Summary

The purpose of this Transportation Impact Analysis (TIA) is to evaluate the impacts on the surrounding transportation infrastructure as a result of the proposed Stallings Farms development. The objectives of the study are:

- To estimate trip generation and distribution for the proposed development.
- To perform vehicular, pedestrian, and bicycle operations analyses for each of the identified study intersections.
- To determine the potential transportation impacts of the proposed development.
- To identify improvements to mitigate the proposed developments transportation impacts.

The proposed Stallings Farms development is located on the south side of Stevens Mill Road on either side of Stallings Road in Stallings, North Carolina. The ±83-acre site is currently undeveloped and zoned MU-1. The site is located within a Town Small Area Plan and will not be rezoned as a part of this development. Based on the site plan provided by the applicant, the proposed development is currently envisioned to include up to 222 single family homes. The overall site density did not meet North Carolina Department of Transportation's (NCDOT's) TIA threshold; however, it should be noted that coordination also occurred with NCDOT staff in review of the assumptions and methodology documented in this TIA.

For the purposes of this TIA, the development is assumed to be completed (built-out) in 2027. Based on the provided site plan, the development proposes three access points, as outlined below.

- Access #1 – A full movement, unsignalized driveway connection to Stallings Road approximately 850 feet south of Stevens Mill Road
- Access #2 – A full movement, unsignalized driveway connection to Oakspring Road approximately 600 feet south of Stevens Mill Road
- Access #3 – A full movement, unsignalized driveway connection to Sweet Birch Drive approximately 850 feet east of Stallings Road

A TIA scoping meeting was held with the Town of Stallings and representatives of the applicant in Stallings in March 2020, to obtain background information and to ascertain the scope and parameters to be included in this TIA. A TIA Memorandum of Understanding (MOU) was developed based on discussions from this meeting that documented all scoping parameters to be used for the TIA and was reviewed and agreed upon by the Town of Stallings, NCDOT, and the applicant. The approved MOU is included in the **Appendix**.

The following AM and PM peak-hour scenarios were analyzed to determine the proposed development's transportation impacts on the surrounding network:

- 2020 Existing Conditions
- 2027 Background Conditions
- 2027 Build Conditions
- 2032 Build Conditions +5 years

Based on coordination at the TIA scoping meeting, this TIA evaluates the vehicular, pedestrian, and bicycle operations under each of the AM and PM peak-hour scenarios above for the following study area intersections:

1. Stallings Road and Stevens Mill Road
2. Stallings Road and Sweet Birch Drive
3. Sweet Birch Drive and Nouvelle Drive
4. Stallings Road and Monroe Expressway WB Ramp
5. Stallings Road and Monroe Expressway EB Ramp
6. Stallings Road and Matthews-Indian Trail Road
7. Stevens Mill Road and Mt. Harmony Church Road
8. Stevens Mill Road and Oakspring Road
9. Stallings Road and Access #1
10. Oakspring Road and Access #2
11. Sweet Birch Drive and Access #3

Note the following modifications from the background data collected were applied to the capacity analyses to meet NCDOT Congestion Management Capacity Analysis Guidelines:

- Right-turn-on-red (RTOR) operations were not allowed.
- Protected-only left-turn phasing was used for analysis of future operations where protected/permitted left-turn phasing exists.
- Lost time adjust was added to the yellow and all-red times provided in the existing signal plans to maintain a total lost time of 5 seconds for each movement.
- A minimum of 4 vehicles per hour were used for permissible movements, excluding movements into and out of the proposed site.

Kimley-Horn was retained to determine the potential transportation impacts of this development (in accordance with the traffic study guidelines in the *NCDOT Policy on Street and Driveway Access to North Carolina Highways* and set forth by the Town of Stallings *TIA Ordinance*) and to identify transportation improvements that may be required to accommodate these impacts. This report presents trip generation, distribution, vehicular and multimodal analyses, crash analyses, and identified transportation improvements required to mitigate anticipated transportation demands produced by the subject development.

Based on vehicular, pedestrian, and bicycle operations analyses performed at each of the identified study intersections, along with the review of the auxiliary turn-lane warrants and crash analyses contained herein, the following improvements are identified to mitigate the impact of the proposed development on the surrounding transportation infrastructure:

#### **Stallings Road and Stevens Mill Road**

- Construction of a westbound left-turn lane with 250 feet of storage

#### **Stallings Road and Sweet Birch Drive**

- Construction of a westbound right-turn lane with 100 feet of storage

#### **Stevens Mill Road and Oakspring Road**

- Construction of an eastbound right-turn lane with 100 feet of storage

#### **Stallings Road and Access #1**

- Construction of a northbound left-turn with 100 feet of storage
- Construction of a northbound right-turn with 100 feet of storage
- Construction of a southbound left-turn with 100 feet of storage
- Construction of a single lane ingress/egress on the westbound approach with an internal protected stem of 100 feet

- Construction of a single lane ingress/egress on the eastbound approach with an internal protected stem of 100 feet

#### **Oakspring Road and Access #2**

- Construction of a single lane ingress/egress on the eastbound approach with an internal protected stem of 100 feet
- Construction of a northbound left-turn lane with 100 feet of storage

#### **Sweet Birch Drive and Access #3**

- Construction of a single lane ingress/egress on the southbound approach with an internal protected stem of 100 feet

#### **Study Area Pedestrian and Bicycle Improvements**

- Construction of a sidewalk along the frontage of the proposed site
- Construct the portion of the Carolina Thread Trail planned within the proposed site
  - These are referred to as North Fork Crooked Creek Greenway West, Sweet Birch Connector, and North Fork Neighborhood Connector in the Connect Stallings Recreation & Greenway Master Plan
  - Final alignments should be coordinated with Town staff through the site planning process

The mitigation improvements identified within the study area are shown in **Figure 1.1**. The improvements shown on this figure are subject to approval by NCDOT and the Town of Stallings. All additions and attachments to the State and Town roadway system shall be properly permitted, designed and constructed in conformance to standards maintained by the agencies.

Per NCDOT and the Town, this development will be able to plat, build, and sell up to 50 lots without construction of any roadway improvements. In order to plat, build, or sell the 51<sup>st</sup> lot, the development must install all the required roadway improvements in order to accommodate the additional traffic the site will generate.

## 2.0 Introduction

The proposed Stallings Farms development is located on the south side of Stevens Mill Road on either side of Stallings Road in Stallings, North Carolina. The ±83-acre site is currently undeveloped and zoned MU-1. The site is located within a Town Small Area Plan and will not be rezoned as a part of this development. Based on the site plan provided by the applicant, the proposed development is currently envisioned to include up to 222 single family homes. The overall site density did not meet North Carolina Department of Transportation's (NCDOT's) TIA threshold; however, it should be noted that coordination also occurred with NCDOT staff in review of the assumptions and methodology documented in this TIA.

For the purposes of this TIA, the development is assumed to be completed (built-out) in 2027. Based on the provided site plan, the development proposes three access points, as outlined below.

- Access #1 – A full movement, unsignalized driveway connection to Stallings Road approximately 850 feet south of Stevens Mill Road
- Access #2 – A full movement, unsignalized driveway connection to Oakspring Road approximately 600 feet south of Stevens Mill Road
- Access #3 – A full movement, unsignalized driveway connection to Sweet Birch Drive approximately 850 feet east of Stallings Road

A TIA scoping meeting was held with the Town of Stallings and representatives of the applicant in Stallings in March 2020, to obtain background information and to ascertain the scope and parameters to be included in this TIA. A TIA Memorandum of Understanding (MOU) was developed based on discussions from this meeting that documented all scoping parameters to be used for the TIA and was reviewed and agreed upon by the Town of Stallings, NCDOT, and the applicant. The approved MOU is included in the **Appendix**.

Kimley-Horn was retained to determine the potential transportation impacts of this development (in accordance with the traffic study guidelines in the *NCDOT Policy on Street and Driveway Access to North Carolina Highways* and set forth by the Town of Stallings *TIA Ordinance*) and to identify transportation improvements that may be required to accommodate these impacts. This report presents trip generation, distribution, vehicular and multimodal analyses, crash analyses, and identified transportation improvements required to mitigate anticipated transportation demands produced by the subject development.

### 3.0 Existing Traffic Conditions

Existing traffic conditions were coordinated with Town of Stallings and NCDOT staff and collected through field observations and historic turning-movement counts to establish the existing conditions baseline analysis.

#### 3.1 STUDY AREA

Based on coordination with the Town, NCDOT, and the applicant, the study area for this TIA includes the following intersections:

1. Stallings Road and Stevens Mill Road
2. Stallings Road and Sweet Birch Drive
3. Sweet Birch Drive and Nouvelle Drive
4. Stallings Road and Monroe Expressway WB Ramp
5. Stallings Road and Monroe Expressway EB Ramp
6. Stallings Road and Matthews-Indian Trail Road
7. Stevens Mill Road and Mt. Harmony Church Road
8. Stevens Mill Road and Oakspring Road
9. Stallings Road and Access #1
10. Oakspring Road and Access #2
11. Sweet Birch Drive and Access #3

**Figure 3.1** shows the study area intersections and the site location, **Figure 3.2** shows the proposed site plan for the development as provided by the applicant, and **Figure 3.3** shows the existing roadway geometry at the study intersections. A full-sized site plan to scale is provided in the **Appendix**.

The primary roadways in the vicinity of the site are US 74/Monroe Expressway, Stallings Road, Stevens Mill Road, Matthews-Indian Trail Road, Mt. Harmony Church Road, and Oakspring Road. **Table 3.1** shows facility type, 2018 NCDOT average daily traffic (ADT) volumes in vehicles per day (vpd), and speed limits, based on the NCDOT Speed Limits Map, for these study area roadways.

| Table 3.1<br>Study Area Roadways |                  |                                                          |               |
|----------------------------------|------------------|----------------------------------------------------------|---------------|
| Roadway                          | Facility type    | ADT                                                      | Speed Limit   |
| US 74/ Monroe Expressway         | 6-lane divided   | 72,500 W of Stallings Road<br>58,500 E of Stallings Road | 45 mph        |
| Stallings Road                   | 2-lane undivided | 12,500 S of US 74<br>6,400 N of US 74                    | 45/35 mph     |
| Stevens Mill Road                | 2-lane undivided | 2,900 W of Stallings Road<br>8,400 E of Stallings Road   | 45 mph/35 mph |
| Matthews-Indian Trail Road       | 2-lane undivided | 5,200 W of Indian Trail Road (2016)                      | 45/25 mph     |
| Mt. Harmony Church Road          | 2-lane undivided | 1,500 N of Stevens Mill Road (2016)                      | 35 mph        |
| Oakspring Road                   | 2-lane undivided | N/A                                                      | 35 mph        |

US 74/Monroe Expressway is a six-lane divided roadway and is classified by NCDOT as a principal arterial with a posted speed limit of 45 miles per hour (mph). US 74 has a NCDOT 2018 ADT volume of 72,500 vpd west of Stallings Road and 58,500 vpd east of Stallings Road. Given

that this is a US route with control of access, there are no sidewalks and bike lanes along the roadway in the project vicinity.

Stallings Road is a two-lane undivided roadway and is classified by NCDOT as a minor collector. Stallings Road has a posted speed limit of 45 mph north of US 74 and a posted speed limit of 35 mph south of US 74. There is sidewalk on the east side of the roadway between US 74 and Gribble Road. No bike lanes are present on the roadway in the project vicinity. Stallings Road has a 2018 NCDOT ADT volume of 12,500 vpd south of US 74 and 6,400 vpd north of US 74.

Stevens Mill Road Road is a two-lane undivided NCDOT major collector with a posted speed limit of 45 mph within the Town of Stallings and 35 mph in the vicinity of Mt. Harmony Church Road, and a NCDOT 2018 ADT volume of 8,400 vpd east of Stallings Road and 2,900 vpd west of Stallings Road. There is sidewalk along the south side of the roadway east of Stallings Road and no bicycle lanes near the project vicinity. There is also a sidewalk along the north side of the roadway along the frontage of the Matthews Charter Academy.

Matthews-Indian Trail Road is a two-lane undivided local roadway with a posted speed limit of 45 mph in the vicinity of Stallings Road. Matthews-Indian Trail Road has a NCDOT 2016 ADT volume of 5,200 vpd east of Stallings Road. There are no sidewalks or bike lanes along the roadway in the project vicinity.

Mt. Harmony Church Road is a two-lane undivided local roadway with a posted speed limit of 35 mph in the vicinity of Stevens Mill Road. Mt. Harmony Church Road has a NCDOT 2016 ADT volume of 1,500 vpd north of Stevens Mill Road and I-485. There is sidewalk along the east side of Mt. Harmony Church Road between Stevens Mill Road and the Matthews Charter Academy driveway.

Oakspring Road is a two-lane undivided local roadway with a posted speed limit of 35 mph in the vicinity of Stevens Mill Road. There is no available NCDOT ADT data for this roadway. There are no sidewalks or bike lanes along the roadway in the project vicinity.

### 3.2 EXISTING TRAFFIC VOLUME DEVELOPMENT

At the time of the approved MOU in March 2020 (included in the **Appendix**) new peak-hour turning movement counts were planned to be collected for this TIA in accordance with the TIA Ordinance. However, due to COVID-19 and associated impacts to work and school schedules at the time of this TIA, new peak-hour turning movement counts may not be indicative of “typical” traffic operations. Existing traffic volumes were determined based on the alternative methodology outlined below.

As a part of a traffic study previously completed for a nearby development, peak-hour intersection turning-movement, heavy-vehicle, pedestrian, and bicycle counts were performed by Quality Counts from 6:00 AM to 9:00 AM and from 4:00 PM to 7:00 PM on Tuesday, February 5, 2019, at the following study intersections while local schools were in session:

- Stallings Road and Stevens Mill Road
- Stallings Road and Monroe Expressway WB Ramp
- Stallings Road and Monroe Expressway EB Ramp
- Stallings Road and Matthews-Indian Trail Road

Also as part of a TIA previously completed for a nearby development, peak-hour turning movement, heavy-vehicle, pedestrian, and bicycle counts were performed by Quality Counts from 6:00 AM to 9:00 AM and from 4:00 PM to 7:00 PM on Tuesday, September 10, 2019 at the following study intersections while local schools were in session:

- Stevens Mill Road and Mt. Harmony Church Road
- Stevens Mill Road and Oakspring Road

The 2019 peak-hour turning movement counts were grown by 3.5% to determine 2020 existing traffic volumes.

Historic peak-hour turning movement counts were not available at the following intersections:

- Stallings Road and Sweet Birch Drive
- Sweet Birch Drive and Nouvelle Drive

To determine existing traffic volumes at these intersections, trip generation rates published in *Trip Generation* (Institute of Transportation Engineers, 10th Edition) were used to calculate traffic volumes entering and exiting the existing residential development. Trip generation was performed for 99 homes on Sweet Birch Drive and 8 homes on Nouvelle Drive, as shown in the figure to the right. Calculated trips were then assigned as turning movements at both intersections based on existing ADTS. Through movements along Stallings Road were calculated based on traffic volumes at Stallings Road and Stevens Mill Road. Hand calculations of these volumes can be found in the **Appendix**.

The peak hour at each intersection was used in the capacity analysis documented herein. Three of the six intersections had an AM peak hour between 7:30-8:30 AM and all intersections with the exception of Stevens Mill Road and Mt. Harmony Church Road had a PM peak hour between 5:00-6:00 PM. The peak hours for each of the intersections are shown in **Table 3.2**.

*Stallings Farms*

*Transportation Impact Analysis*

| Table 3.2 – AM & PM Intersection Peak Hours   |              |              |
|-----------------------------------------------|--------------|--------------|
| Intersection                                  | AM Peak Hour | PM Peak Hour |
| Stallings Road and Stevens Mill Road          | 7:15 - 8:15  | 5:00 - 6:00  |
| Stallings Road and Monroe Expressway WB Ramp  | 7:30 - 8:30  | 5:00 - 6:00  |
| Stallings Road and Monroe Expressway EB Ramp  | 7:30 - 8:30  | 5:00 - 6:00  |
| Stallings Road and Matthews-Indian Trail Road | 7:30 - 8:30  | 5:00 - 6:00  |
| Stevens Mill Road and Mt. Harmony Church Road | 7:00 - 8:00  | 4:30 - 5:30  |
| Stevens Mill Road and Oakspring Road          | 7:15 - 8:15  | 5:00 - 6:00  |

Volume balancing was performed along Stallings Road between the Monroe Expressway WB Ramp and the Monroe Expressway EB Ramp and between Stevens Mill Road and Sweet Birch Drive (as outlined above). No volume balancing was performed between the other study area intersections due to the presence of multiple commercial and residential driveways, spacing between each of the study intersections, and the time between the count collection dates. Peak-hour intersection turning-movement count data is provided in the **Appendix**.

**Figure 3.4** shows the 2020 existing AM and PM peak-hour traffic volumes.

[illegible]

## 4.0 Background Traffic Volume Development

Projected background (non-project) traffic is defined as the expected growth or change in traffic volumes on the surrounding roadway network between the year the existing counts were collected (2020) and the expected build-out years (2027, 2032), absent the construction and opening of the proposed project. This includes both non-specific general growth based on historical increase in local traffic volumes (historical background growth), along with specific growth and/or change in traffic volumes caused by future off-site developments that are not yet fully-constructed and/or planned transportation projects specifically identified within the vicinity of the proposed development.

### 4.1 HISTORICAL BACKGROUND GROWTH TRAFFIC

Historical background growth is the increase in existing traffic volumes due to usage increases and non-specific growth throughout the area, and accounts for growth that is independent of specific approved developments. Historical background growth traffic is calculated using an annual growth rate, which is applied to the existing traffic volumes up to the future horizon years. As shown in the approved TIA MOU, based on a review of historical ADT data available for study area roadways, a growth rate of 3.5% per year was applied to 2020 existing traffic volumes to calculate base 2027 and 2032 background traffic volumes. **Table 4.1** shows the data used to determine the 3.5% annual growth rate, which was approved by NCDOT staff, consistent with adjacent TIAs performed in the area.

| <b>Table 4.1 - Historical Growth</b> |       |      |                                      |
|--------------------------------------|-------|------|--------------------------------------|
| ADT Count Location                   | 2016  | 2010 | Growth Rate<br>(between 2016 & 2010) |
| Stallings Road (south of US 74)      | 11000 | 9400 | 2.7%                                 |
| Stallings Road (north of US 74)      | 5900  | 5100 | 2.5%                                 |
| Matthews-Indian Trail Rd             | 5200  | 3500 | 6.8%                                 |
| <b>AVERAGE</b>                       |       |      | <b>4.0%</b>                          |

## 4.2 FUTURE OFF-SITE DEVELOPMENT TRIPS

Based on input from Town of Stallings and NCDOT staff, the following five future off-site developments are expected to impact traffic volumes within the study area and are included in the background traffic volumes for this TIA.

**Table 4.2 – Future Off-Site Developments**

| Development                                            | Land Use/Intensity                                                                                                                             | % Build-out | TIA Included? | Required Improvements                                                                                                                                                                                                                        |
|--------------------------------------------------------|------------------------------------------------------------------------------------------------------------------------------------------------|-------------|---------------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|

| Oakspring Development                                  | 174 Single Family Homes                                                                                                                        | 0%          | No            | None                                                                                                                                                                                                                                         |

Volumes for the approved developments were obtained from the following sources:

- Atrium Stallings TIA (Kimley-Horn, July 2019)
- Stallings Road Townhomes TIA (Kimley-Horn, December 2019)
- Willows at Stallings TIA (Kimley-Horn, December 2019)

A TIA was not performed for the Harmony Hills or Oakspring developments. Therefore, trip generation rates published in *Trip Generation* (Institute of Transportation Engineers, 10th Edition) were used to determine project trips for these sites and which were distributed throughout the study area based on the existing ADTs and turning movement counts. Future off-site development calculations can be found in the **Appendix**.

**Figure 4.1** and **Figure 4.2** show the 2027 background AM and PM peak-hour traffic volumes, respectively.

### 4.3 PLANNED TRANSPORTATION PROJECTS

Based on a review of the adopted transportation plans for the area, ten future transportation projects have been identified within the study area, two of which are currently funded through construction based on the current planning documents.

1. John Street/Old Monroe Road Widening (U-4714) – Funded (outside TIA study area)
2. Chestnut Lane Connector (U-5808) – Funded (outside TIA study area)
3. Connect Stallings Recreation and Greenway Master Plan
4. Enhanced Intersection at Stallings Road and Stevens Mill Road (C-5)
5. Enhanced Intersection at Stallings Road and US 74 (C-7)
6. Crossing at Stevens Mill Road and Whetstone Drive (C-15)
7. Crossing of Stallings Rd. at North Fork Creek (South branch) (C-18)
8. Stallings Rd., part 1 (4,700' sidewalk facilities) (S-5)
9. Stallings Rd., part 2 (2,100' sidewalk facilities) (S-9)
10. North Fork Trail (T-3)

Note that the eight unfunded projects (Project Numbers 3-10 above) were not included in the operations analyses discussed in Sections 6.0 and 8.0 since funding nor schedule have been identified.

There are two funded NCDOT roadway projects near the identified study area:

- John Street/Old Monroe Road Widening (U-4714) – *Outside TIA study area*
  - Widen to multi-lanes from Trade Street to Wesley Chapel-Stouts Road (superstreet on some locations)
  - Right-of-way in fiscal year (FY) 2020-2021
  - Construction in FY 2022-2025
- Chestnut Lane Connector (U-5808) – *Outside TIA study area*
  - Construct new roadway from Matthews-Indian Trail Road to Gribble Road
  - Right-of-way in FY 2020
  - Construction in FY 2021-2023

Project right-of-way and construction dates are based on the September 2020 NCDOT State Transportation Improvement Program (STIP) and are subject to change. These projects fall outside the TIA study area and were therefore not included in future year analysis.

The following projects have been identified, but are unfunded within the identified study area:

- Connect Stallings Recreation and Greenway Master Plan
  - Central Spine Loop Trail (CS1)
  - Sweet Birch Connector (C4)
  - North Fork Neighborhood Connector (C5)
- Enhanced Intersection at Stallings Road and Stevens Mill Road (C-5)
  - Provide safe pedestrian crossing opportunities at the center of the Stallings School Node.
  - Coordinate improvements with Stallings Elementary School and the Monroe Bypass project.
- Enhanced Intersection at Stallings Road and US 74 (C-7)

- Provide safe pedestrian crossing opportunities to improve the pedestrian connection of the north and south sides of Town.
- Coordinate improvements with Monroe Expressway project.
- Crossing at Stevens Mill Road and Whetstone Drive (C-15)
  - Provide a safe pedestrian crossing at a prominent intersection of the Stallings School Node.
- Crossing of Stallings Rd. at North Fork Creek (South branch) (C-18)
  - Provide a safe pedestrian crossing for the North Fork Trail (project T-3) at Stallings Road at the south end of the Stallings School Node.
- Stallings Rd., part 1 (4,700' sidewalk facilities) (S-5)
  - Connect existing sidewalk along Stallings Road south of US 74 (at project C-7), and North Fork Trail (project T-3) to Stevens Mill Rd., along east side of Stallings Rd. This will create a continuous sidewalk link from Stevens Mill Rd. to St Johns Road and connect the Stallings School Node to the Downtown Node.
- Stallings Rd., part 2 (2,100' sidewalk facilities) (S-9)
  - Connect the Stallings School Node to Fairhaven Park, the North Fork Trail (project T-3), adjacent residential areas, and the existing Stevens Mill sidewalk.
- North Fork Trail (T-3)
  - Connect the Stallings School Node to residential neighborhoods and Fairhaven Park, existing sidewalks, and areas south of US 74

## 5.0 Site Traffic Volume Development

Site traffic developed for this TIA is defined as the site-generated trips expected to be added to the study area by the construction of the proposed development, and the distribution and assignment of that traffic throughout the surrounding network.

### 5.1 SITE ACCESS

Based on the provided site plan, the development proposes three access points, as outlined below.

- Access #1 – A full movement, unsignalized driveway connection to Stallings Road approximately 850 feet south of Stevens Mill Road
- Access #2 – A full movement, unsignalized driveway connection to Oakspring Road approximately 600 feet south of Stevens Mill Road
- Access #3 – A full movement, unsignalized driveway connection to Sweet Birch Drive approximately 850 feet east of Stallings Road

### 5.2 TRAFFIC GENERATION

The traffic generation potential of the proposed development was determined using the trip generation rates published in *Trip Generation* (Institute of Transportation Engineers, 10th Edition) for all land uses.

Based on the most recent site plan, provided by the Applicant, the proposed development is envisioned to included up to 222 single family homes.

**Table 5.1** summarizes the projected trip generation for the proposed development. During a typical weekday, the proposed development has the potential to generate 162 and 218 net new external trips during the AM and PM peak hours, respectively.

| Table 5.1 - Trip Generation   |           |              |              |           |            |              |            |           |
|-------------------------------|-----------|--------------|--------------|-----------|------------|--------------|------------|-----------|
| Land Use                      | Intensity | Daily        | AM Peak Hour |           |            | PM Peak Hour |            |           |
|                               |           |              | Total        | In        | Out        | Total        | In         | Out       |
| Single-Family Homes           | 222 DU    | 2,166        | 162          | 41        | 121        | 218          | 137        | 81        |
|                               |           |              |              |           |            |              |            |           |
| <b>Net New External Trips</b> |           | <b>2,166</b> | <b>162</b>   | <b>41</b> | <b>121</b> | <b>218</b>   | <b>137</b> | <b>81</b> |

### 5.3 SITE TRAFFIC DISTRIBUTION

The proposed development's trips were assigned to the surrounding network based on existing peak-hour turning movements, surrounding land uses, and population densities in the area. The site traffic distribution was reviewed and approved as part of the TIA MOU by the Town of Stallings, NCDOT, and the applicant:

- 15% to/from the north along Mt. Harmony Church Road
- 10% to/from the north along Stallings Road
- 5% to/from the east along Stevens Mill Road
- 5% to/from the south along Oakspring Road
- 25% to/from the west on Monroe Expressway
- 25% to/from the east on Monroe Expressway
- 5% to/from the east along Matthews-Indian Trail Road
- 10% to/from the south along Stallings Road

These distributions are also detailed in **Figure 5.1**

### 5.4 2027 BUILD-OUT TRAFFIC

The 2027 build-out traffic volumes include the 2027 background traffic volumes and site traffic volumes. **Figures 5.2** and **5.3** show the projected 2027 build-out traffic volumes for the AM and PM peak-hours.

### 5.5 2032 BUILD-OUT TRAFFIC

As required by the Town of Stallings *TIA Ordinance*, an analysis scenario of five years after the build-out year was performed. The 2032 build-out traffic volumes include the assignment of the proposed site traffic generation added to the 2032 base background traffic volumes. **Figure 5.4** shows the projected 2032 build-out traffic volumes for the AM and PM peak-hours.

Intersection volume development worksheets are provided in the **Appendix**.

## 6.0 Vehicular Capacity Analysis

Based on the requirements set forth by the Town of Stallings *TIA Ordinance* and in accordance with the traffic study guidelines in the *NCDOT Policy on Street and Driveway Access to North Carolina Highways*, vehicular capacity analyses were performed at the study area intersections for the AM and PM peak-hour scenarios.

Vehicular capacity analyses were performed for the AM and PM peak hours using the Synchro Version 10 software to determine the operating characteristics at the signalized and stop-controlled intersections of the adjacent street network and to evaluate the impacts of the proposed development. Capacity is defined as the maximum number of vehicles that can pass over a particular road segment, or through a particular intersection, within a specified period of time under prevailing operational, geometric and controlling conditions within a set time duration. This software program uses methodologies contained in the *Highway Capacity Manual* (HCM) to determine the operating characteristics of an intersection.

The HCM defines LOS as a “quantitative stratification of a performance measure or measures representing quality of service” and is used to “translate complex numerical performance results into a simple A-F system representative of travelers’ perceptions of the quality of service provided by a facility or service”. The HCM defines six levels of service, LOS A through LOS F, with A having the best operating conditions from the traveler’s perspective and F having the worst. However, it must be understood that “the LOS letter result hides much of the complexity of facility performance”, and that “the appropriate LOS for a given system element in the community is a decision for local policy makers”. According to the HCM, “for cost, environmental impact, and other reasons, roadways are typically designed not to provide LOS A conditions during peak periods but instead to provide some lower LOS that balances individual travelers’ desires against society’s desires and financial resources. Nevertheless, during low-volume periods of the day, a system element may operate at LOS A.”

LOS for a two-way stop-controlled (TWSC) intersection is determined by the control delay and is reported for the side-street approaches, typically during the highest volume periods of the day, the AM and PM peak periods. Control delay includes initial deceleration delay, queue move-up time, stopped delay, and final acceleration delay. With respect to field measurements, control delay is defined as the total elapsed time from the time a vehicle stops at the end of the queue to the time the vehicle departs from the stop line. It is typical for stop sign-controlled side streets and driveways intersecting major streets to experience long delays during peak hours, particularly for left-turn movements. The majority of the traffic moving through the intersection on the major street experiences little or no delay.

LOS for signalized intersections is reported for the intersection as a whole, and typically during the highest volume periods of the day, the AM and PM peak periods. One or more movements at an intersection may experience a low level-of-service, while the intersection as a whole may operate acceptably.

**Table 6.0-A** and **6.0-B** list the LOS control delay thresholds published in the HCM for unsignalized and signalized intersections, respectively, as well as the unsignalized operational descriptions assumed herein.

| Table 6.0-A<br>Vehicular LOS Control Delay Thresholds for<br><u>Unsignalized</u> Intersections |                                             |                 |
|------------------------------------------------------------------------------------------------|---------------------------------------------|-----------------|
| Level-of-Service                                                                               | Average Control Delay per Vehicle [sec/veh] |                 |

NCDOT staff provided the signal geometric plans for the signalized study area intersections, which were used in the development of the existing conditions Synchro network. The cycle length and splits were optimized given the timing inputs in the existing conditions network and in accordance with NCDOT Congestion Management guidelines.

The following modifications from the background data collected were applied to the capacity analyses to meet NCDOT *Congestion Management Capacity Analysis Guidelines*:

- Right-turn-on-red (RTOR) operations were not allowed.
- Protected-only left-turn phasing was used for analysis of future operations where protected/permitted left-turn phasing exists.
- Lost time adjust was added to the yellow and all-red times provided in the existing signal plans to maintain at total lost time of 5 seconds for each movement.
- A minimum of 4 vehicles per hour were used for permissible movements, excluding movements into and out of the proposed site.

Splits were optimized under background conditions at signalized intersections due to the protected-only phasing and additional laneage that was modeled in future years. Signal plans for the study area intersections are included in the **Appendix**.

Peak-hour factors (PHFs) were taken directly from the count data for the existing conditions scenario. A weighted PHF was utilized for all future year scenarios in the AM peak hour to account for the proximity of Stallings Elementary School and Matthews Charter Academy. A PHF of 0.9 was assumed for all future scenarios in the PM peak hour.

Heavy vehicle percentages were taken directly from field observations, subject to a 2% minimum.

Mitigation for vehicular traffic impacts caused by the proposed development were noted and identified based on Town of Stallings and NCDOT mitigation requirements. When determining the proposed development's vehicular traffic impact to the study area intersections, the build-out conditions were compared to the background conditions for each analysis scenario.

#### **NCDOT Mitigation Requirements**

Based on the NCDOT's *Policy on Street and Driveway Access to North Carolina Highways*, "the applicant shall be required to identify mitigation improvements to the roadway network if at least one of the following conditions exists when comparing base network conditions to project conditions:

- the total average delay at an intersection or individual approach increases by 25% or greater, while maintaining the same level of service
- the Level of Service degrades by at least one level,
- or Level of Service is 'F'."

#### **Town of Stallings Mitigation Requirements**

Based on the Town of Stallings *TIA Ordinance*, "the applicant shall be required to identify mitigation improvements to the transportation network if at least one of the following conditions exists when comparing the multimodal operations of future year background conditions to future year build-out conditions:

- a) the total average delay at an intersection or individual approach increases by 25% or greater, while maintaining the same LOS,
- b) the LOS degrades by at least one level,
- c) or the LOS is "D" or below the LOS threshold dictated by the zoning (as outlined in Table 6.0-C) in the background conditions and the proposed project shows a negative impact on the intersection or approach"

| <b>Table 6.0-C – LOS Thresholds</b> |                         |                        |
|-------------------------------------|-------------------------|------------------------|
| Zoning                              | Vehicular LOS Threshold | Bike/Ped LOS Threshold |
| AG, CIV                             | C                       | E                      |
| SFR, MFT, VSR, IND                  | D                       | D                      |
| TC, MU, C-74, CP-485, CZ, CUP       | E                       | C                      |
| Within a Small Area Plan Boundary   | E                       | C                      |
| All Other                           | D                       | D                      |

Capacity analysis reports generated by Synchro Version 10 software are included in the **Appendix**. Additionally, queuing and blocking reports generated by the SimTraffic microsimulation model are included in the **Appendix**.

Pedestrian and bicycle operations analyses is later discussed in **Section 8.0**.

## 6.1 STALLINGS ROAD AND STEVENS MILL ROAD

**Table 6.1** summarizes the LOS, control delay, and 95<sup>th</sup> percentile queue lengths at the existing unsignalized, all-way stop intersection of Stallings Road and Stevens Mill Road. This intersection is planned to be signalized by one of the future off-site developments.

| Table 6.1 - Stallings Road and Stevens Mill Road               |                  |          |      |           |       |       |          |      |           |      |                             |

# 95th percentile volume exceeds capacity, queue may be longer

Per the Town of Stallings mitigation thresholds, the mitigation threshold for vehicular LOS at this intersection is **LOS E**, since it falls within the Stallings Elementary School small area plan. Per NCDOT mitigation thresholds, the mitigation threshold for vehicular LOS at this intersection is **LOS D**.

Under 2020 existing conditions, the westbound and southbound approaches are expected to operate with moderate to long delays in the AM peak hour and the northbound approach is expected to operate with moderate delays in the PM peak hour.

Under 2027 background conditions, the following improvements are planned to be constructed at this intersection by others:

- Installation of a traffic signal
- Extension of the southbound left-turn lane to provide 225 feet of storage
- Construction of an eastbound right-turn lane with 100 feet of storage

These improvements were included in all future year analyses. With these improvements in place, the westbound and southbound approaches are expected to operate at LOS E in both peak hours.

Under 2027 build-out conditions, with the addition of site traffic, these approaches are continued to operate at LOS E with increases in delay.

To mitigate these drops in delay, a westbound left turn-lane with 250 feet of storage is recommended. With the addition of this turn lane, the westbound approach is expected to return to LOS D in both peak hours.

This intersection is expected to meet signal warrants in both peak hours under background and build-out conditions. It should be noted that NCDOT may require a full, 13-hour signal warrant analysis be performed at this intersection prior to installation of a traffic signal. This 13-hour signal warrant was originally scoped to be included in this TIA (as shown in the MOU in the **Appendix**), however, 13-hour counts were not able to be collected due to COVID-19 and associated impacts to work and school schedules, as discussed in **Section 3.2**.

## 6.2 STALLINGS ROAD AND SWEET BIRCH DRIVE

**Table 6.2** summarizes the LOS, control delay, and 95<sup>th</sup> percentile queue lengths at the unsignalized intersection of Stallings Road and Sweet Birch Drive.

| Table 6.2 - Stallings Road and Sweet Birch Drive |                |          |      |         |         |
|--------------------------------------------------|----------------|----------|------|---------|---------|
| Condition                                        | Measure        | WB       |      | NB      | SB      |
|                                                  |                | WBT      | WBLR | NBTR    | SBLT    |
| AM Peak Hour                                     |                |          |      |         |         |
| 2020 Existing                                    | LOS (Delay)    | C (18.2) |      | A (0.0) | A (0.5) |

|                                                  | Synchro 95th Q | 27'      | -    | 0'      | 6'      |
| 2027 Build-out IMP                               | LOS (Delay)    | C (23.8) |      | A (0.0) | A (1.9) |
|                                                  | Synchro 95th Q | 17'      | 0'   | 0'      | 6'      |
| 2032 Build-out                                   | LOS (Delay)    | D (31.2) |      | A (0.0) | A (2.4) |
|                                                  | Synchro 95th Q | 29'      | 0'   | 0'      | 8'      |

Per the Town of Stallings mitigation thresholds, the mitigation threshold for vehicular LOS at this intersection is **LOS E**, since it falls within the Stallings Elementary School small area plan. Per NCDOT mitigation thresholds, the mitigation threshold for vehicular LOS at this intersection is **LOS D**.

Under 2027 background conditions, the westbound, stop-controlled approach is expected to operate with moderate delays in the AM peak hour and short delays in the PM peak hour. With the addition of site traffic, the westbound, stop-controlled approach is expected to operate with moderate delays in both peak hours.

Due to the increase in delay in the AM peak hour and the drop in LOS in the PM peak hour, mitigation was considered. To mitigate these impacts, a westbound right-turn lane with 100 feet of storage is recommended. With the addition of this turn lane, delays in the AM peak hour are expected to decrease within 4 seconds of the background condition. Further, in the PM peak hour, the westbound, stop-controlled approach is expected to return to LOS C.

### 6.3 SWEET BIRCH DRIVE AND NOUVELLE DRIVE

**Table 6.3** summarizes the LOS, control delay, and 95<sup>th</sup> percentile queue lengths at the unsignalized intersection of Sweet Birch Drive and Nouvelle Drive.

| Table 6.3 - Sweet Birch Drive and Nouvelle Drive |                |         |         |         |
|--------------------------------------------------|----------------|---------|---------|---------|
| Condition                                        | Measure        | EB      | WB      | NB      |

| 2032 Build-out                                   | LOS (Delay)    | A (0.0) | A (0.3) | A (9.1) |
|                                                  | Synchro 95th Q | 0'      | 0'      | 1'      |
| PM Peak Hour                                     |                |         |         |         |
| 2020 Existing                                    | LOS (Delay)    | A (0.0) | A (0.7) | A (8.9) |
|                                                  | Synchro 95th Q | 0'      | 0'      | 1'      |
| 2027 Background                                  | LOS (Delay)    | A (0.0) | A (0.5) | A (9.1) |
|                                                  | Synchro 95th Q | 0'      | 0'      | 1'      |
| 2027 Build-out                                   | LOS (Delay)    | A (0.0) | A (0.5) | A (9.1) |
|                                                  | Synchro 95th Q | 0'      | 0'      | 1'      |
| 2032 Build-out                                   | LOS (Delay)    | A (0.0) | A (0.4) | A (9.3) |
|                                                  | Synchro 95th Q | 0'      | 0'      | 1'      |

Per the Town of Stallings mitigation thresholds, the mitigation threshold for vehicular LOS at this intersection is **LOS E**, since it falls within the Stallings Elementary School small area plan. Per NCDOT mitigation thresholds, the mitigation threshold for vehicular LOS at this intersection is **LOS D**.

Under 2027 background conditions, the northbound, stop-controlled approach is expected to operate with short delays in both peak hours. With the addition of site traffic, the stop-controlled approach is expected to continue to operate with short delays. Therefore, no improvements are recommended for capacity purposes.

## 6.4 STALLINGS ROAD AND MONROE EXPRESSWAY WB RAMP

**Table 6.4** summarizes the LOS, control delay, and 95<sup>th</sup> percentile queue lengths at the signalized intersection of Stallings Road and Monroe Expressway WB Ramp.

| Table 6.4 - Stallings Road and Monroe Expressway WB Ramp |                |          |      |          |      |          |              |
|----------------------------------------------------------|----------------|----------|------|----------|------|----------|--------------|

| 2032 Build-out                                           | LOS (Delay)    | E (62.7) |      | C (29.8) |      | D (50.3) | D (42.8)     |
|                                                          | Synchro 95th Q | #392'    | 237' | 336'     | 27'  | 209'     |              |

Per the Town of Stallings mitigation thresholds, the mitigation threshold for vehicular LOS at this intersection is **LOS E**, since it falls within the Monroe Bypass Corridor small area plan. Per NCDOT mitigation thresholds, the mitigation threshold for vehicular LOS at this intersection is **LOS D**.

Under 2027 background conditions, the overall intersection is projected to operate at LOS D in both peak hours. With the addition of site traffic, the overall intersection and its approaches are expected to continue to operate acceptably with no changes in LOS. Since the overall intersection operates under capacity and the delay is expected to increase minimally, no improvements are recommended at this intersection for capacity purposes.

## 6.5 STALLINGS ROAD AND MONROE EXPRESSWAY EB RAMP

**Table 6.5** summarizes the LOS, control delay, and 95<sup>th</sup> percentile queue lengths at the unsignalized intersection of Stallings Road and Monroe Expressway EB Ramp.

| Table 6.5 - Stallings Road and Monroe Expressway EB Ramp         |                |          |       |          |          |      |              |
|------------------------------------------------------------------|----------------|----------|-------|----------|----------|------|--------------|

Per the Town of Stallings mitigation thresholds, the mitigation threshold for vehicular LOS at this intersection is **LOS E**, since it falls within the Monroe Bypass Corridor small area plan. Per NCDOT mitigation thresholds, the mitigation threshold for vehicular LOS at this intersection is **LOS D**.

Under 2027 background conditions, an exclusive eastbound right-turn lane with 325 feet of storage will be constructed at this intersection by the Atrium Union West development. This lane was included in all future year analyses.

Under 2027 background conditions, the overall intersection is projected to operate at LOS C and D in the AM and PM peak hours, respectively. With the addition of site traffic, the overall intersection and its approaches are expected to continue to operate acceptably with no changes in LOS. Since the overall intersection operates under capacity and the delay is expected to increase minimally, no improvements are recommended at this intersection for capacity purposes.

## 6.6 STALLINGS ROAD AND MATTHEWS-INDIAN TRAIL ROAD

**Table 6.6** summarizes the LOS, control delay, and 95<sup>th</sup> percentile queue lengths at the signalized intersection of Stallings Road and Matthews-Indian Trail Road.

| # 95th percentile volume exceeds capacity, queue may be longer |                |          |       |          |       |          |      |          |      |              |

Per the Town of Stallings mitigation thresholds, the mitigation threshold for vehicular LOS at this intersection is **LOS E**, since it falls within the Monroe Bypass Corridor small area plan. Per NCDOT mitigation thresholds, the mitigation threshold for vehicular LOS at this intersection is **LOS D**.

Under 2027 background conditions, in both peak hours, the overall intersection is expected to operate at LOS C and each approach is expected to operate at LOS C or better. With the addition of site traffic in the both peak hours, the southbound approach is projected to drop from LOS B to LOS C. However, the increase in delay is expected to be less than 2 seconds in each peak hour.

Since the overall intersection operates at the same LOS as the background conditions and the delay is expected to increase minimally, no improvements are recommended at this intersection for capacity purposes.

## 6.7 STEVENS MILL ROAD AND MT. HARMONY CHURCH ROAD

**Table 6.7** summarizes the LOS, control delay, and 95<sup>th</sup> percentile queue lengths at the unsignalized intersection of Stevens Mill Road and Mt. Harmony Church Road.

| 2032 Build-out                                            | LOS (Delay)    | C (23.5)  | B (11.7) |      | A (0.2) | A (6.5) |      |
|                                                           | Synchro 95th Q | 15'       | 3'       | 14'  | 0'      | 16'     | 0'   |

This intersection falls outside of the Town of Stallings. Per NCDOT mitigation thresholds, the mitigation threshold for vehicular LOS at this intersection is **LOS D**.

Under 2027 background conditions, the eastbound stop-controlled approach is projected to operate at LOS F with long delays during the AM peak hour.

With the addition of site traffic, the eastbound stop-controlled approach is expected to continue to operate at LOS F in the AM peak hour with an increase in delay (25.2 seconds). This approach is projected to have 18 vehicles in the AM peak hour and 29 vehicles in the PM peak hour, with no site trips added. Due to the low volume of traffic on this approach and the addition of no site trips, no improvements are recommended at this intersection for capacity purposes.

## 6.8 STEVENS MILL ROAD AND OAKSPRING ROAD

**Table 6.8** summarizes the LOS, control delay, and 95<sup>th</sup> percentile queue lengths at the unsignalized intersection of Stevens Mill Road and Oakspring Road.

| Table 6.8 - Stevens Mill Road and Oakspring Road |                |         |     |          |           |     |
|--------------------------------------------------|----------------|---------|-----|----------|-----------|-----|
| Condition                                        | Measure        | EB      |     | WB       | NB        |     |
|                                                  |                | EBTR    | EBR | WBLT     | NBLR      | NBR |
| AM Peak Hour                                     |                |         |     |          |           |     |
| 2020 Existing                                    | LOS (Delay)    | A (0.0) |     | A (4.6)  | F (671.3) |     |
|                                                  | Synchro 95th Q | 0'      | -   | 18'      | 644'      | -   |

|                                                  | Synchro 95th Q | 0'      | -   | 18'      | 670'      | 0'  |
| 2027 Build-out                                   | LOS (Delay)    | A (0.0) |     | A (9.7)  | F (658.8) |     |
|                                                  | Synchro 95th Q | 0'      | -   | 19'      | 693'      | 0'  |
| 2027 Build-out IMP                               | LOS (Delay)    | A (0.0) |     | A (5.1)  | F (202.3) |     |
|                                                  | Synchro 95th Q | 0'      | 0'  | 16'      | 423'      | 0'  |
| 2032 Build-out                                   | LOS (Delay)    | A (0.0) |     | A (6.9)  | F (625.7) |     |
|                                                  | Synchro 95th Q | 0'      | 0'  | 24'      | 777'      | 0'  |

Per the Town of Stallings mitigation thresholds, the mitigation threshold for vehicular LOS at this intersection is **LOS E**, since it falls within the Stallings Elementary School small area plan. Per NCDOT mitigation thresholds, the mitigation threshold for vehicular LOS at this intersection is **LOS D**.

Under 2027 background conditions, an exclusive northbound right-turn lane with 100 feet of storage will be constructed at this intersection by the Willows at Stallings development. This lane was included in all future year analyses.

Under 2027 background conditions, the northbound stop-controlled approach is projected to operate at LOS F with long delays and queues during both peak hours.

With the addition of site traffic, the northbound stop-controlled approach is expected to continue to operate at LOS F with increases in delay in both peak-hours. To mitigate these impacts, an

eastbound right-turn lane with 100 feet of storage is recommended. With the addition of this turn lane, delays in the PM peak hours are expected to be mitigated.

## 6.9 STALLINGS ROAD AND ACCESS #1

**Table 6.9** summarizes the LOS, control delay, and 95<sup>th</sup> percentile queue lengths at the proposed full-movement intersection of Stallings Road and Access #1.

| Table 6.9 - Stallings Road and Access #1 |                |          |           |         |         |
|------------------------------------------|----------------|----------|-----------|---------|---------|
| Condition                                | Measure        | EB       | WB        | NB      | SB      |
|                                          |                | EBLTR    | WBLTR     | NBLTR   | SBLTR   |
| AM Peak Hour                             |                |          |           |         |         |
| 2027 Build-out                           | LOS (Delay)    | C (24.2) | F (54.4)  | A (0.3) | A (0.1) |
|                                          | Synchro 95th Q | 16'      | 62'       | 1'      | 0'      |
| 2032 Build-out                           | LOS (Delay)    | E (39.1) | F (175.1) | A (0.4) | A (0.2) |
|                                          | Synchro 95th Q | 27'      | 124'      | 1'      | 0'      |
| PM Peak Hour                             |                |          |           |         |         |
| 2027 Build-out                           | LOS (Delay)    | C (20.9) | E (43.8)  | A (0.8) | A (0.6) |
|                                          | Synchro 95th Q | 9'       | 36'       | 2'      | 2'      |
| 2032 Build-out                           | LOS (Delay)    | D (28.7) | F (82.5)  | A (0.8) | A (0.6) |
|                                          | Synchro 95th Q | 13'      | 60'       | 2'      | 2'      |

Per the Town of Stallings mitigation thresholds, the mitigation threshold for vehicular LOS at this intersection is **LOS E**, since it falls within the Stallings Elementary School small area plan. Per NCDOT mitigation thresholds, the mitigation threshold for vehicular LOS at this intersection is **LOS D**.

Based on the site plan shown in **Figure 3.2**, the eastbound and westbound approaches were assumed to have one ingress lane and one egress lane. Under 2027 build-out conditions, the eastbound approach is expected to operate with short delays and queues. The westbound approach is expected to operate with long delays in the AM peak hour and moderate delays in the PM peak hour. A second egress lane was considered on this approach, but it would only be expected to decrease delays by 3.7 seconds in the AM peak hour and 2.3 seconds in the PM peak hour. It is not uncommon for stop-controlled side-streets to experience long delays in the peak hours. The developer could consider a second egress lane at this access if they desire to through the site planning process, but it is expected to add minimal capacity benefits.

The SimTraffic maximum queues for these approaches show minimal queueing is expected on the eastbound and westbound approaches; 50 feet and 88 feet, respectively. Therefore, a minimum internal protected stem of 100 feet is recommended for both approaches.

## 6.10 OAKSPRING ROAD AND ACCESS #2

**Table 6.10** summarizes the LOS, control delay, and 95<sup>th</sup> percentile queue lengths at the proposed full-movement intersection of Oakspring Road and Access #2.

| Table 6.10 - Oakspring Road and Access #2 |                |          |         |         |
|-------------------------------------------|----------------|----------|---------|---------|
| Condition                                 | Measure        | EB       | NB      | SB      |
|                                           |                | EBLR     | NBTR    | SBTL    |
| AM Peak Hour                              |                |          |         |         |
| 2027 Build-out                            | LOS (Delay)    | C (17.3) | A (0.1) | A (0.0) |
|                                           | Synchro 95th Q | 4'       | 0'      | 0'      |
| 2032 Build-out                            | LOS (Delay)    | C (20.7) | A (0.1) | A (0.0) |
|                                           | Synchro 95th Q | 5'       | 0'      | 0'      |
| PM Peak Hour                              |                |          |         |         |
| 2027 Build-out                            | LOS (Delay)    | B (14.6) | A (0.3) | A (0.0) |
|                                           | Synchro 95th Q | 2'       | 1'      | 0'      |
| 2032 Build-out                            | LOS (Delay)    | C (16.4) | A (0.3) | A (0.0) |
|                                           | Synchro 95th Q | 2'       | 1'      | 0'      |

Per the Town of Stallings mitigation thresholds, the mitigation threshold for vehicular LOS at this intersection is **LOS E**, since it falls within the Stallings Elementary School small area plan. Per NCDOT mitigation thresholds, the mitigation threshold for vehicular LOS at this intersection is **LOS D**.

Based on the site plan shown in **Figure 3.2**, the eastbound approach was assumed to have one ingress lane and one egress lane. Under 2027 build-out conditions, the eastbound stop-controlled approach of this intersection is expected to operate with short delays and queues; therefore, no mitigation is identified for this proposed access for capacity purposes.

A SimTraffic maximum queue of 96 feet is expected on the eastbound approach in the AM peak hour; therefore, a minimum internal protected stem of 100 feet is recommended.

### 6.11 SWEET BIRCH DRIVE AND ACCESS #3

**Table 6.11** summarizes the LOS, control delay, and 95<sup>th</sup> percentile queue lengths at the proposed full-movement intersection of Sweet Birch Drive and Access #3.

| Table 6.11 - Sweet Birch Drive and Access #3 |                |         |         |         |
|----------------------------------------------|----------------|---------|---------|---------|
| Condition                                    | Measure        | EB      | WB      | SB      |
|                                              |                | EBLT    | WBTR    | SBLR    |
| AM Peak Hour                                 |                |         |         |         |
| 2027 Build-out                               | LOS (Delay)    | A (0.5) | A (0.0) | A (8.7) |
|                                              | Synchro 95th Q | 0'      | 0'      | 1'      |
| 2032 Build-out                               | LOS (Delay)    | A (0.4) | A (0.0) | A (8.8) |
|                                              | Synchro 95th Q | 0'      | 0'      | 1'      |
| PM Peak Hour                                 |                |         |         |         |
| 2027 Build-out                               | LOS (Delay)    | A (0.7) | A (0.0) | A (8.6) |
|                                              | Synchro 95th Q | 0'      | 0'      | 0'      |
| 2032 Build-out                               | LOS (Delay)    | A (0.6) | A (0.0) | A (8.6) |
|                                              | Synchro 95th Q | 0'      | 0'      | 0'      |

Per the Town of Stallings mitigation thresholds, the mitigation threshold for vehicular LOS at this intersection is **LOS E**, since it falls within the Stallings Elementary School small area plan. Per NCDOT mitigation thresholds, the mitigation threshold for vehicular LOS at this intersection is **LOS D**.

Based on the site plan shown in **Figure 3.2**, the southbound approach was expected to have one ingress lane and one egress lane. Under 2027 build-out conditions, the southbound stop-controlled approach of this intersection is expected to operate with short delays and queues; therefore, no mitigation is identified for this proposed access for capacity purposes.

A SimTraffic maximum queue of 32 feet is expected on the southbound approach in the AM peak hour; therefore, a minimum internal protected stem of 100 feet is recommended.

## 7.0 Auxiliary Turn Lane Warrants

Warrants for additional turn-lane improvements for unsignalized intersections beyond those necessary for capacity were determined based on a review of the figure titled 'Warrant for Left and Right-Turn Lanes' found on page 80 in the *NCDOT Policy On Street And Driveway Access to North Carolina Highways*, included in the **Appendix**. The following auxiliary turn lanes are warranted under background and build-out conditions:

### Background

#### Stallings Road and Sweet Birch Drive

- Northbound right-turn lane with 50 feet of storage
- Southbound left-turn lane with 75 feet of storage

#### Stevens Mill Road and Mt. Harmony Church Road

- Northbound right-turn lane with 75 feet of storage
- Southbound left-turn lane with 125 feet of storage

#### Stevens Mill Road and Oakspring Road

- Eastbound right-turn lane with 300 feet of storage
- Westbound left-turn lane with 200 feet of storage

### Build-Out

#### Stallings Road and Sweet Birch Drive

- Northbound right-turn lane with 50 feet of storage
- Southbound left-turn lane with 75 feet of storage

Since these turn lanes are warranted in the background conditions, no auxiliary turn lanes are recommended at this intersection.

#### Stevens Mill Road and Mt. Harmony Church Road

- Northbound right-turn lane with 75 feet of storage
- Southbound left-turn lane with 125 feet of storage

Since these turn lanes are warranted in the background conditions, no auxiliary turn lanes are recommended at this intersection.

#### Stevens Mill Road and Oakspring Road

- Eastbound right-turn lane with 300 feet of storage
- Westbound left-turn lane with 200 feet of storage

Since these turn lanes are warranted in the background conditions, no auxiliary turn lanes are recommended at this intersection.

#### Stallings Road and Access #1

- Northbound left-turn lane with 50 feet of storage
- Northbound right-turn lane with 50 feet of storage
- Southbound left-turn lane with 50 feet of storage

Based on coordination with NCDOT and the Town, a northbound left-turn lane with 100 feet of storage will also be required at Oakspring Road and Access #2.

A minimum turn lane storage length of 100 feet may be required by NCDOT for auxiliary turn lanes. All warranted turn lanes are recommended to contain at least 100 feet of storage. Final required turn lane lengths should be confirmed with Town and NCDOT staff.

## 8.0 Pedestrian and Bicycle Operations Analysis

In addition to vehicular capacity analyses, the Town of Stallings also requires non-vehicular operations analyses, including pedestrian and bicycle analyses, to allow for the safe and convenient travel for all transportation modes.

### Pedestrian Operations Analysis

The *Highway Capacity Manual 6<sup>th</sup> Edition* was used to evaluate the pedestrian LOS at the study intersections. The HCM provides methodology for calculating the pedestrian LOS for TWSC intersections and signalized intersections based on geometric data, demand data and signal control data including, but not limited to:

- Number of lanes on the major street
- Crossing distance
- Traffic volumes
- Motorist yielding rates to pedestrians
- Cycle length
- Walk time
- Presence of pedestrian phase

It should be noted that pedestrian delay and LOS calculation methodology for TWSC intersections in the HCM only applies to the major street, free-flow crossings. It is stated in the HCM that “approaches where conflicting traffic is stop-controlled are assumed to result in negligible delay for pedestrians, as vehicles are required to stop and wait for conflicting vehicle and pedestrian traffic before proceeding.”

**Tables 8.0-A** and **8.0-B** list the pedestrian LOS thresholds published in the HCM for unsignalized and signalized intersections, respectively.

| <b>Table 8.0-A</b><br><b>Pedestrian LOS Thresholds for</b><br><b>Unsignalized Intersections</b> |                                                       |
|-------------------------------------------------------------------------------------------------|-------------------------------------------------------|

| F                                                                        | > 5.50        |

The pedestrian LOS calculation worksheets are included in the **Appendix**.

**Table 8.1** summarizes the LOS and control delay (seconds per pedestrian) at the study area intersections for each of the analysis scenarios. The LOS and delay are reported for pedestrians crossing the free-flow approaches only at the TWSC intersections and reported for all approaches at signalized intersections.

As shown in **Table 8.1**, the following intersections do not warrant mitigation based on Town of Stallings pedestrian mitigation thresholds:

- Stallings Road and Stevens Mill Road
- Sweet Birch Drive and Nouvelle Drive
- Stallings Road and Monroe Expressway WB Ramp
- Stallings Road and Monroe Expressway EB Ramp
- Stallings Road and Matthews-Indian Trail Road
- Stevens Mill Road and Mt. Harmony Church Road
- Stevens Mill Road and Oakspring Road
- Sweet Birch Drive and Access #3

Pedestrian mitigation is warranted at the following intersections:

- Stallings Road and Sweet Birch Drive
- Stallings Road and Access #1
- Oakspring Drive and Access #2

To mitigate these increased pedestrian delays, the following pedestrian improvements should be implemented, consistent with the current Town pedestrian plan:

- Construction of a sidewalk along the frontage of the proposed site
- Construct the portion of the Carolina Thread Trail planned within the proposed site
  - These are referred to as North Fork Crooked Creek Greenway West, Sweet Birch Connector, and North Fork Neighborhood Connector in the Connect Stallings Recreation & Greenway Master Plan
  - Final alignments should be coordinated with Town staff through the site planning process

### Bicycle Operations Analysis

The HCM does not provide methodology to analyze the operations of bicyclists at unsignalized intersections. As shown in the approved MOU, the Charlotte Department of Transportation's (CDOT) Bicycle LOS Worksheet was used to determine the bicycle levels-of-service. The CDOT Bicycle LOS Worksheet assesses bicyclists' comfort based on geometric and traffic signal features including, but not limited to:

- Number of lanes crossed
- Presence of conflicting turning movements
- Presence of bike lanes
- Left-turn phase treatment (permitted green, protected green, leading green)

Intersection features are assigned points, as identified by CDOT in the worksheet. LOS for each approach is calculated based on the accumulation of points for each geometric and traffic signal feature identified in the worksheet. A higher number of points correlates to a better LOS. The LOS thresholds for CDOT's Bicycle LOS Worksheet are shown in **Table 8.2**.

| Table 8.2<br>Bicycle LOS Thresholds |         |
|-------------------------------------|---------|
| Level-of-Service                    | Points  |
| A                                   | 93+     |
| B                                   | 74 – 92 |
| C                                   | 55 – 73 |
| D                                   | 37 – 54 |
| E                                   | 19 – 36 |
| F                                   | 0 – 18  |

CDOT's Bicycle LOS Worksheet was originally developed to assess the operations of bicycles at signalized intersections. Based on review of the inputs related to traffic signals, the worksheet was used to evaluate bicycle LOS at unsignalized intersections in this study using the following assumptions to better reflect unsignalized operations:

- Opposing vehicle left-turns were permitted (made on Green Ball only)
- Right-turn-on-red was permitted

**Table 8.3** summarizes the LOS for bicyclists at the study area intersections. CDOT's Bicycle LOS Worksheet does not take into account demand volumes; therefore, the bicycle LOS does not adjust or differ between AM and PM peak hours, nor does it differ for future-year scenarios unless the intersection laneage is modified. The bicycle LOS calculation worksheets are included in the **Appendix**.

| Table 8.3 - Bicycle Operations                |                               |         |         |         |         |                |

| 11. Sweet Birch Drive and Access 3            | Build                         | B (85)  | D (50)  | -       | C+ (70) | <b>C (68)</b>  |

**Table 8.3** shows that all intersections are projected to operate in the LOS C to LOS F range under all analysis scenarios. The poor LOS along Stallings Road, Matthews-Indian Trail Road, and Oakspring Road is primarily attributed to speeds greater than 30 mph, lack of bicycle facilities and bicyclist conflicts with left- and right-turning vehicular movements. It should be noted that based on existing counts, very few bicyclists currently navigate routes through the study area intersections.

## 8.1 TRANSIT FACILITIES

There are currently no transit stops in the proximity of the study area.

The Town of Stallings is currently being evaluated to be included in the Charlotte Area Transit System (CATS) LYNX Silver Line. The LYNX Silver Line is a proposed 26-mile light rail project from the City of Belmont in Gaston County, through Center City Charlotte and the Town of the Matthews, with a potential extension into Union County. Several alternatives are currently be considered for the future alignment through Stallings, several of which would cross Stallings Road in the vicinity of the Monroe Expressway and Matthews-Indian Trail Road

## 9.0 Crash Data Analysis

Crash data was obtained at the study intersections for crashes that occurred between July 1, 2017 and June 30, 2020. For the intersections at the Monroe Expressway, due to the recent construction, crash data was only available between November 1, 2018 and June 30, 2020. Over this three-year period, 62 total crashes were reported at the existing study intersections. The summaries below only reflect crashes reported at the existing study intersections. The breakdown of crashes at these study intersections by severity, frequency and crash type are shown in the tables below.

**Table 9.1 – Crash Severity Summary**

| Crash Type           | Number of Crashes |
|----------------------|-------------------|
| Fatal Crashes        | 0                 |
| Class A              | 0                 |
| Class B              | 6                 |
| Class C              | 4                 |
| Property Damage Only | 52                |
| <b>Total</b>         | <b>62</b>         |

**Table 9.1** above displays the total number of crashes by severity type from most to least severe. As shown, there were no fatal crashes reported and 16% of the crashes involved injury or possible injury at the study intersections over the past three years. The crash types are defined as follows:

- Class A - crashes where serious injury is suspected and can include significant loss of blood or broken bones.
- Class B - crashes where minor injury is suspected, such as bruises or minor cuts.
- Class C - crashes wherein possible injuries occur, which are injuries reported by the person or indicated by his/her behavior, but no wounds or injuries are physically present, such as limping or complaint of neck pain.
- Property Damage Only (PDO) – crashes where no injury is reported.

**Table 9.2 – Crash Frequency Summary**

| Location                                      | Crashes/100 MEV |
|-----------------------------------------------|-----------------|
| Stallings Road and Stevens Mill Road          | 66.95           |
| Stallings Road and Monroe Expressway WB       | 29.90           |
| Stallings Road and Monroe Expressway EB       | 388.64          |
| Stallings Road and Matthews-Indian Trail Road | 41.71           |
| Stevens Mill Road and Mt. Harmony Church Road | 59.52           |
| Stevens Mill Road and Oakspring Road          | 138.89          |
| Stallings Road and Sweet Birch Drive          | 13.83           |
| Sweet Birch Drive and Nouvelle Drive          | N/A             |
| <b>Average</b>                                | <b>92.73</b>    |

**Table 9.2** shows the crash rates at the study area intersections resulted in a weighted average crash rate of 92.73 crashes per 100 million entering vehicles (MEV), with the highest rate occurring at the signalized intersection of Stallings Road and Monroe Expressway EB. There have been 26 reported crashes over the two-year period reported at this intersection.

**Table 9.3 – Crash Type Summary**

|                               | Stallings Road and Stevens Mill Road | Stallings Road and Monroe Expressway WB | Stallings Road and Monroe Expressway EB | Stevens Mill Road and Mt. The most common crash types reported at the study area intersections were angle crashes (35%) and rear-end collisions caused by slowing or stopping vehicles (34%). These types of crashes are often associated with increased congestion at both signalized and unsignalized intersections. As shown in **Table 9.3**, angle and rear-end collisions occurred at six of the eight existing study area intersections.

Crash data provided by NCDOT is included in the **Appendix**.

## 10.0 Identified Mitigation Improvements

Based on the vehicular, pedestrian, and bicycle operations analyses performed at each of the identified study intersections, along with review of the auxiliary turn-lane warrants and crash analyses contained herein, the following improvements are identified to mitigate the impact of the proposed development on the surrounding transportation infrastructure:

### **Stallings Road and Stevens Mill Road**

- Construction of a westbound left-turn lane with 250 feet of storage

### **Stallings Road and Sweet Birch Drive**

- Construction of a westbound right-turn lane with 100 feet of storage

### **Stevens Mill Road and Oakspring Road**

- Construction of an eastbound right-turn lane with 100 feet of storage

### **Stallings Road and Access #1**

- Construction of a northbound left-turn with 100 feet of storage
- Construction of a northbound right-turn with 100 feet of storage
- Construction of a southbound left-turn with 100 feet of storage
- Construction of a single lane ingress/egress on the westbound approach with an internal protected stem of 100 feet
- Construction of a single lane ingress/egress on the eastbound approach with an internal protected stem of 100 feet

### **Oakspring Road and Access #2**

- Construction of a single lane ingress/egress on the eastbound approach with an internal protected stem of 100 feet
- Construction of a northbound left-turn lane with 100 feet of storage

### **Sweet Birch Drive and Access #3**

- Construction of a single lane ingress/egress on the southbound approach with an internal protected stem of 100 feet

### **Study Area Pedestrian and Bicycle Improvements**

- Construction of a sidewalk along the frontage of the proposed site
- Construct the portion of the Carolina Thread Trail planned within the proposed site
  - These are referred to as North Fork Crooked Creek Greenway West, Sweet Birch Connector, and North Fork Neighborhood Connector in the Connect Stallings Recreation & Greenway Master Plan
  - Final alignments should be coordinated with Town staff through the site planning process

The mitigation improvements identified within the study area are shown in **Figure 10.1**. The improvements shown on this figure are subject to approval by NCDOT and the Town of Stallings. All additions and attachments to the State and Town roadway system shall be properly permitted, designed and constructed in conformance to standards maintained by the agencies.

Per NCDOT and the Town, this development will be able to plat, build, and sell up to 50 lots without construction of any roadway improvements. In order to plat, build, or sell the 51<sup>st</sup> lot, the development must install all the required roadway improvements in order to accommodate the additional traffic the site will generate.

# TIA Memorandum of Understanding

## Town of Stallings

### TIA Memorandum of Understanding

Date: March 12, 2020

#### Project Information

Project Name: Stallings Farms  
Project Location: S. of Stevens Mill Rd. at Stallings Rd  
Project Owner: Stallings Farm Investment, LLC

#### Applicant Information

Applicant Name: Dave Sierk  
Applicant Telephone: -  
Applicant Email: dsierk1@gmail.com

Application Request: Small Area Plan  
(eg. Rezoning, preliminary or final plat, special use permit, site plan, etc.)

#### Existing

Existing Zoning: MU-1  
Existing Land Use: Undeveloped  
Parcel Size: ± 83.12 acres

#### Proposed Development

Proposed Zoning: MU-1 (Small Area Plan)  
Proposed Land Use: Single Family Detached Homes  
Proposed Size/Density: 222 dwelling units  
Proposed Build-Out Year: 2027

#### Scenarios to be Analyzed:

- ☒ 2020 Existing Conditions  
☒ 2027 Background Conditions  
☒ 2027 Build Conditions  
☒ 2032 Build Conditions + 5 years  
☐ Other: \_\_\_\_\_

Background Growth Rate: 3.5% (based on study area ADTs and Atrium Stallings TIA)

Count Times: ☒ 6:00–9:00 AM, 4:00–7:00 PM ☐ Other: \_\_\_\_\_

Future Offsite Developments (Name of Development, Location, Land Use, Density, TIA info. if applicable):

**Funded TIP/CIP projects (Name of Project, Location, Improvements, Schedule):**

- John Street/Old Monroe Road Widening (U-4714AC) – *Outside TIA study area*
  - Widen to multi-lanes from Trade Street to Wesley Chapel-Stouts Road (superstreet on some locations)
  - Right-of-way in FY 2020-2021
  - Construction in FY 2022-2025
- Chestnut Lane Connector (U-5808) – *Outside TIA study area*
  - Construct new roadway from Matthews-Indian Trail Road to Gribble Road
  - Right-of-way in FY 2020 (In Progress)
  - Construction in FY 2021-2022

**Projects identified in adopted Transportation Plans (Name of Project, Location, Improvements, Schedule):**

- Connect Stallings Recreation and Greenway Master Plan
  - Central Spine Loop Trail (CS1)
  - Sweet Birch Connector (C4)
  - North Fork Neighborhood Connector (C5)
- Enhanced Intersection at Stallings Road and Stevens Mill Road (C-5)
  - Provide safe pedestrian crossing opportunities at the center of the Stallings School Node.
  - Coordinate improvements with Stallings Elementary School and the Monroe Bypass project.
- Enhanced Intersection at Stallings Road and US 74 (C-7)
  - Provide safe pedestrian crossing opportunities to improve the pedestrian connection of the north and south sides of Town.
  - Coordinate improvements with Monroe Bypass project.
- Crossing at Stevens Mill Road and Whetstone Drive (C-15)
  - Provide a safe pedestrian crossing at a prominent intersection of the Stallings School Node
- Crossing of Stallings Rd. at North Fork Creek (South branch) (C-18)
  - Provide a safe pedestrian crossing for the North Fork Trail (project T-3) at Stallings Road at the south end of the Stallings School Node.
- Stallings Rd., part 1 (4,700' sidewalk facilities) (S-5)
  - Connect existing sidewalk along Stallings Road south of US 74 (at project C-7), and North Fork Trail (project T-3) to Stevens Mill Rd., along east side of Stallings Rd.
- Stallings Rd., part 2 (2,100' sidewalk facilities) (S-9)
  - Connect the Stallings School Node to Fairhaven Park, the North Fork Trail (project T-3), adjacent residential areas, and the existing Stevens Mill sidewalk.
- North Fork Trail (T-3)
  - Connect the Stallings School Node to residential neighborhoods and Fairhaven Park, existing sidewalks, and areas south of US 74.

**Trip Generation Table (ITE 10<sup>th</sup> Edition):**

| Table 1 - Trip Generation |           |       |              |    |     |              |     |     |
|---------------------------|-----------|-------|--------------|----|-----|--------------|-----|-----|
| Land Use                  | Intensity | Daily | AM Peak Hour |    |     | PM Peak Hour |     |     |
|                           |           |       | Total        | In | Out | Total        | In  | Out |
| Single-Family Homes       | 222 DU    | 2,166 | 162          | 41 | 121 | 218          | 137 | 81  |
| Net New External Trips    |           | 2,166 | 162          | 41 | 121 | 218          | 137 | 81  |

**Proposed Access:**

- Access #1 – proposed full-movement access on Stallings Road
- Access #2 – proposed full-movement access on Oakspring Road
- Access #3 – proposed full-movement access on Sweet Birch Drive

**Intersections to be Studied:**

| Intersection                                                  | Type of Analysis                    |                                     |

<sup>\*</sup> 13 hour turning movement counts to be collected

<sup>^</sup> New turning movement counts to be collected (no existing counts or prior counts from February 2019)

☒ **Other Considerations (i.e. pedestrian, transit, other scenarios):**

- A weighted peak hour factor (PHF) will be used in the AM peak hour to capture impacts of the adjacent school
- Pedestrian LOS analysis at study area intersections using Highway Capacity Manual (HCM) 6<sup>th</sup> Edition methodologies
- Bicycle LOS analysis at study area intersections using CDOT's *Bicycle Level of Service* worksheet
- Turn lanes and storage lengths for the major street (uncontrolled) approaches at unsignalized intersections will be identified using NCDOT's *Policy on Street and Driveway Access to North Carolina Highways*

☒ **Traffic Signal Warrants:** Stallings Road and Stevens Mill Road

☒ **Crash Analysis Required:**

- At existing study intersections, based on most recent 3 years available

☐ **Additional Traffic Analysis (i.e. Synchro, VISSIM, SIDRA, etc.):** N/A

**Agreement by all Parties**

The undersigned agree to the contents and methodology described in this Memorandum of Understanding (MOU) for completing the required TIA supportive of the development application identified herein. Any changes to the above methodology contemplated by the applicant or transportation consultant must be submitted to the Town in writing and a revised MOU executed before such changes will be accepted for the TIA report. The applicant must provide payment in full to the Town for preparation of the TIA prior to commencement of the work. Any additional services incurred by the transportation consultant in addition to the MOU must be approved by the Town, and agreed to and paid for by the applicant, prior to performance of the additional work.

## **Agenda Item: Harmony Hills Townhomes Subdivision Preliminary Plat**

**DATE:** February 20, 2019

**FROM:** Mary Jo Gollnitz, Senior Planner

### **Background/Issue:**

Pursuant to § 155.405.7.B.3 of the Matthews Unified Development Ordinance, the Preliminary Plan of a proposed subdivision is forwarded to the Board of Commissioners within 30 days following the determination that all required standards have been met. The Board of Commissioners shall approve or approve with conditions the Preliminary Plan. If the Preliminary Plan is conditionally approved, the minutes of the Board of Commissioners meeting shall state the measures necessary for the Final Plat to be approved.

Approval of the preliminary plat allows the developer/property owner to grade the land and begin development. About the subdivision:

- Rezoning of Mt Harmony Townhomes to R-15 (CD) and R-VS was approved by the Town Board on June 11, 2018 (2017-674 Mt Harmony Townhomes).
- 123 townhomes will be created from 6 original lots totaling  $\pm 16.69$  acres.
- Property will be accessed from Stevens Mill Rd and Mt Harmony Church Rd.
- Fencing and landscape along adjacent property will be installed per rezoning requirements.
- Public improvements will be installed along Mt Harmony Church Rd, Stevens Mill Rd, and within the development including walking trail, sidewalk, curb and gutter and streetscape.
- Final Plat(s) shall be submitted in accordance with §155.405.8 and 9 of Matthews UDO, including the installation of all required improvements.
- Developer cannot get building permits or sell lots until final plat(s) are recorded.

### **Proposal/Solution:**

The attached preliminary plat does meet all the R-15(CD)and R-VS requirements and conditions that were stipulated at the time of rezoning. The proposed preliminary plat complies with the Matthews UDO.

### **Financial Impact:**

There will be 123 new homes added to the tax base.

### **Related Town Goal(s) and/or Strategies:**

Economic Development/Land Use Planning: to enhance the quality of life of the citizens by aggressively pursuing a balanced tax base; and by planning for orderly growth and development.

### **Recommended Motion/Action:**

Staff recommends approval of the preliminary plat as presented.

1. Refer to "Roadway Standard Drawings NDOT" dated January 2012 and "Standard Specifications for Roads and Structures" dated January 2012.
2. Do not program for late night flashing operation unless otherwise directed by the engineer.
3. The order of Phase 3 and Phase 4 may be reversed.
4. Set all detector units to presence mode.
5. Set all detector units to presence mode.
6. Maximum times shown in timing chart are for free-run operation only. Coordinated signal system timing values supersede these values.
7. Master loop system ID: 11093.
8. Controller Asset #: 0598.

## Intersection Summary

Area Type: Other

Cycle Length: 120

Actuated Cycle Length: 120

Offset: 0 (0%), Referenced to phase 2:NBT and 6:SBT, Start of Yellow

Natural Cycle: 80

Control Type: Actuated-Coordinated

Maximum v/c Ratio: 0.72

Intersection Signal Delay: 28.0

Intersection LOS: C

Intersection Capacity Utilization 42.8%

ICU Level of Service A

Analysis Period (min) 15

## Splits and Phases: 4: Stallings Rd &amp; Monroe Expressway WB Ramp

Lanes, Volumes, Timings  
4: Stallings Rd & Monroe Expressway WB Ramp

Intersection Summary

Area Type: Other

Cycle Length: 120

Actuated Cycle Length: 120

Offset: 0 (0%), Referenced to phase 2:NBT and 6:SBT, Start of Yellow

Natural Cycle: 80

Control Type: Actuated-Coordinated

Maximum v/c Ratio: 0.72

Intersection Signal Delay: 29.9

Intersection LOS: C

Intersection Capacity Utilization 42.8%

ICU Level of Service A

Analysis Period (min) 15

Splits and Phases: 5: Stallings Rd & Monroe Expressway EB Ramp

Lanes, Volumes, Timings  
5: Stallings Rd & Monroe Expressway EB Ramp

Cycle Length: 60

Actuated Cycle Length: 38.7

Natural Cycle: 50

Control Type: Actuated-Uncoordinated

Maximum v/c Ratio: 0.54

Intersection Signal Delay: 10.6

Intersection LOS: B

Intersection Capacity Utilization 56.1%

ICU Level of Service B

Analysis Period (min) 15

Splits and Phases: 6: Stallings Rd & Matthews-Indian Trail Rd

Cycle Length: 120

Actuated Cycle Length: 120

Offset: 0 (0%), Referenced to phase 2:NBT and 6:SBT, Start of Yellow

Natural Cycle: 80

Control Type: Actuated-Coordinated

Maximum v/c Ratio: 0.73

Intersection Signal Delay: 26.8

Intersection LOS: C

Intersection Capacity Utilization 61.1%

ICU Level of Service B

Analysis Period (min) 15

Splits and Phases: 4: Stallings Rd & Monroe Expressway WB Ramp

Lanes, Volumes, Timings  
4: Stallings Rd & Monroe Expressway WB Ramp

Cycle Length: 120

Actuated Cycle Length: 120

Offset: 0 (0%), Referenced to phase 2:NBT and 6:SBT, Start of Yellow

Natural Cycle: 80

Control Type: Actuated-Coordinated

Maximum v/c Ratio: 0.73

Intersection Signal Delay: 31.0

Intersection LOS: C

Intersection Capacity Utilization 61.1%

ICU Level of Service B

Analysis Period (min) 15

Splits and Phases: 5: Stallings Rd & Monroe Expressway EB Ramp

Intersection Summary

Area Type: Other

Cycle Length: 75

Actuated Cycle Length: 75

Natural Cycle: 80

Control Type: Actuated-Uncoordinated

Maximum v/c Ratio: 1.13

Intersection Signal Delay: 56.0

Intersection LOS: E

Intersection Capacity Utilization 85.9%

ICU Level of Service E

Analysis Period (min) 15

~ Volume exceeds capacity, queue is theoretically infinite.

Queue shown is maximum after two cycles.

# 95th percentile volume exceeds capacity, queue may be longer.

Queue shown is maximum after two cycles.

Splits and Phases: 1: Stallings Rd & Stevens Mill Rd

Intersection Summary

Area Type: Other

Cycle Length: 120

Actuated Cycle Length: 120

Offset: 0 (0%), Referenced to phase 2:NBT and 6:SBT, Start of Yellow

Natural Cycle: 90

Control Type: Actuated-Coordinated

Maximum v/c Ratio: 0.78

Intersection Signal Delay: 36.2

Intersection LOS: D

Intersection Capacity Utilization 63.6%

ICU Level of Service B

Analysis Period (min) 15

Splits and Phases: 4: Stallings Rd & Monroe Expressway WB Ramp

Intersection Summary

Area Type: Other

Cycle Length: 120

Actuated Cycle Length: 120

Offset: 0 (0%), Referenced to phase 2:NBT and 6:SBT, Start of Yellow

Natural Cycle: 90

Control Type: Actuated-Coordinated

Maximum v/c Ratio: 0.78

Intersection Signal Delay: 33.6

Intersection LOS: C

Intersection Capacity Utilization 63.6%

ICU Level of Service B

Analysis Period (min) 15

Splits and Phases: 5: Stallings Rd & Monroe Expressway EB Ramp

Area Type: Other

Cycle Length: 60

Actuated Cycle Length: 52.6

Natural Cycle: 55

Control Type: Actuated-Uncoordinated

Maximum v/c Ratio: 0.86

Intersection Signal Delay: 20.3

Intersection LOS: C

Intersection Capacity Utilization 76.6%

ICU Level of Service D

Analysis Period (min) 15

# 95th percentile volume exceeds capacity, queue may be longer.

Queue shown is maximum after two cycles.

Splits and Phases: 6: Stallings Rd & Matthews-Indian Trail Rd

Lanes, Volumes, Timings  
7: Mt. Harmony Church Rd & Stevens Mill Rd

Stallings Farms TIA

Intersection Summary

Area Type: Other

Cycle Length: 70

Actuated Cycle Length: 70

Natural Cycle: 75

Control Type: Actuated-Uncoordinated

Maximum v/c Ratio: 1.14

Intersection Signal Delay: 44.3

Intersection LOS: D

Intersection Capacity Utilization 92.8%

ICU Level of Service F

Analysis Period (min) 15

~ Volume exceeds capacity, queue is theoretically infinite.

Queue shown is maximum after two cycles.

# 95th percentile volume exceeds capacity, queue may be longer.

Queue shown is maximum after two cycles.

Splits and Phases: 1: Stallings Rd & Stevens Mill Rd

Lanes, Volumes, Timings  
2: Stallings Rd & Sweet Birch Dr

Stallings Farms TIA

Intersection Summary

Area Type: Other

Cycle Length: 120

Actuated Cycle Length: 120

Offset: 0 (0%), Referenced to phase 2:NBT and 6:SBT, Start of Yellow

Natural Cycle: 90

Control Type: Actuated-Coordinated

Maximum v/c Ratio: 0.76

Intersection Signal Delay: 35.8

Intersection LOS: D

Intersection Capacity Utilization 54.7%

ICU Level of Service A

Analysis Period (min) 15

Splits and Phases: 4: Stallings Rd & Monroe Expressway WB Ramp

Intersection Summary

Area Type: Other

Cycle Length: 120

Actuated Cycle Length: 120

Offset: 0 (0%), Referenced to phase 2:NBT and 6:SBT, Start of Yellow

Natural Cycle: 90

Control Type: Actuated-Coordinated

Maximum v/c Ratio: 0.76

Intersection Signal Delay: 35.9

Intersection LOS: D

Intersection Capacity Utilization 60.9%

ICU Level of Service B

Analysis Period (min) 15

m Volume for 95th percentile queue is metered by upstream signal.

Intersection Summary

Area Type: Other

Cycle Length: 60

Actuated Cycle Length: 48.5

Natural Cycle: 60

Control Type: Actuated-Uncoordinated

Maximum v/c Ratio: 0.83

Intersection Signal Delay: 20.3

Intersection LOS: C

Intersection Capacity Utilization 83.6%

ICU Level of Service E

Analysis Period (min) 15

# 95th percentile volume exceeds capacity, queue may be longer.

Queue shown is maximum after two cycles.

Splits and Phases: 6: Stallings Rd & Matthews-Indian Trail Rd

Lanes, Volumes, Timings  
7: Mt. Harmony Church Rd & Stevens Mill Rd

Stallings Farms TIA
